

Pin 27 is A14 on EPROM but NOT WE on Flash and SRAM. Pin 1 is A14 on Flash or SRAM but VPP on EPROM

For EPROM and SRAM NOT WE takes priority over NOT OE so OE can be left low. For flash to program the flash the OE must be high.

A simple ROM/EPROM/EEPROM/RAM board for a BBC Master or Acorn Electron cartridge slot. RD/WR for Master or Electron is configurable via a link. As is Pin 1 and Pin 27 (VPP/A14/NWR). The circuit works with 32K or 16K devices.
